

Ant Simulator

A Complete Beginners Guide

Starting Out

In order to start playing Ant Simulator you need to actually play the game. To do so go to <https://roblox.com/games/10459759013>. Once there click the big green play button.

After you've loaded into Ant Simulator, Climb the ladder and complete the tutorial. Once your done, head to the apple field and click one of the apples, you should get one apple in your storage. Do that 14 more times then head down to the sell area or click the 'Money' button on the side. You should get \$15. Just repeat the process and once you have 100\$, click the 'Shopping Cart' button. Once you've opened the shop menu, click tools, and buy the bat. Tools give you a harvest multiplier (eg. If you harvest an apple you'll get two apples instead of one).

General Information

This game has many different aspects and features and this section is just going to explain some of them.

UI

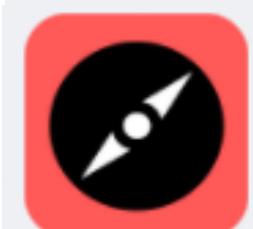

Settings

Sell

Shop

Quests

Settings - The game settings.

Shop - The Shop where you can buy tools, backpacks, and gamepasses

Sell - Teleports you to the sell area

Quests - Shows you your active quests.

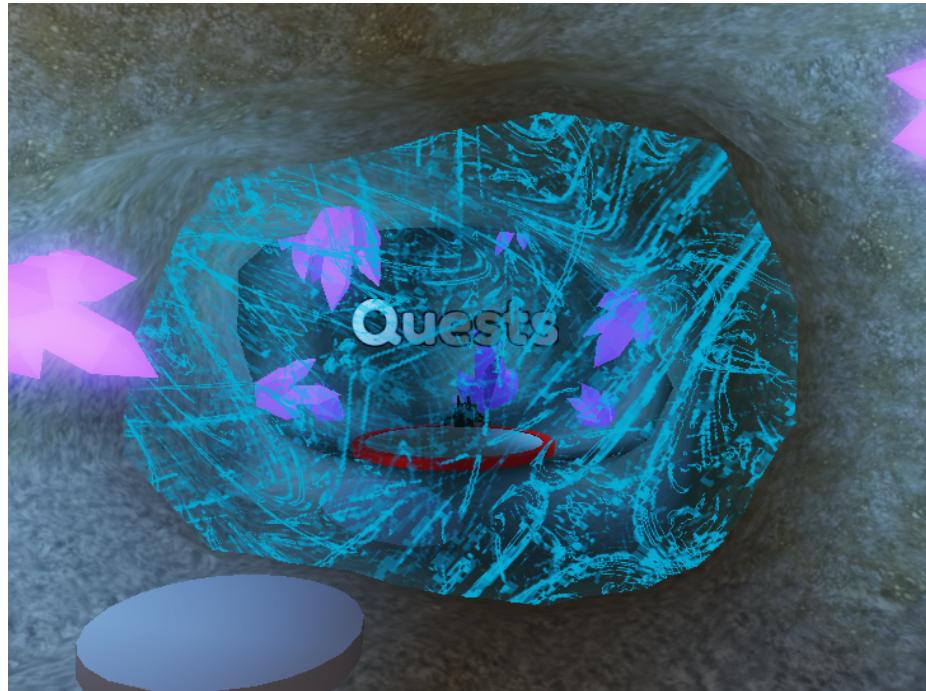

Barriers

There are currently 5 types of barriers in this game: White, Blue, Green, Red, and Rainbow.

White barriers are unlock-able barriers they can be unlocked by completing quests or progressing in the game. An example of these barriers are the rebirth doors.

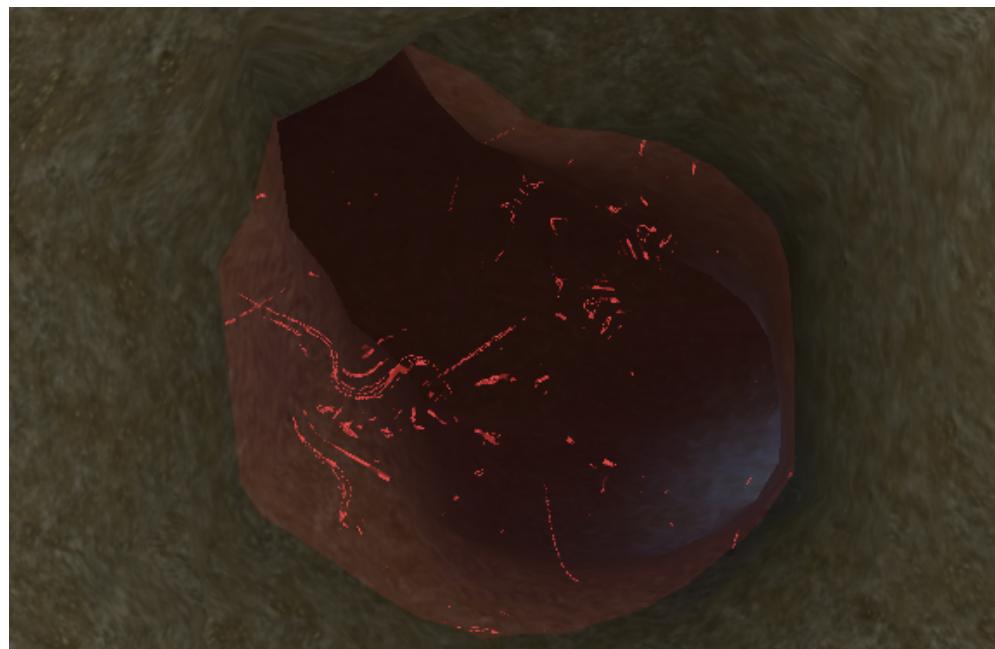

Blue barriers are update-locked barriers they will only be unlocked once an update comes out, they are just in place to hint at future updates. An example of these barriers is the barrier in front of the quests.

Green barriers aren't actually barriers at all, they are in place of white barriers when you unlock them. They are just to show that there was previously a barrier there. They dont have any collision and are just there for visual effect.

Red barriers are barriers that will probably never be unlocked they are there to show you that you cant go in that area. An example of these barriers is the barrier in one of the caves.

Rainbow barriers are barriers, I dont really know what they do but they're there. If you manage to find one then good luck figuring it out.
